Teacher Notes

When to use?
This activity is good to use at the start of a topic. It is a useful way to determine children’s knowledge prior to learning about rainforests.

Why use?
To evaluate the knowledge of pupils at the start of a topic.

How to use?
Start off looking at a few pictures of rainforests and ask the pupils to think what the weather might be like. Then all pupils add a comment to the weather section of the mind map. Ask pupils to add notes to other areas that they feel they can add to/ on the areas that they know something about.

Complete the activity again at the end of the topic in a different colour pen to see how much has been learnt during the topic.

More able
They can be given a blank mind map and add their own information as much as they know.

Alternatively
Use this activity as a review of the topic to show how much pupils can remember from the topic.
Your tasks:
- Add information about rainforests to your mind map that you know already.
